

Installation / Installation / Instalación

3" Universal Flapper

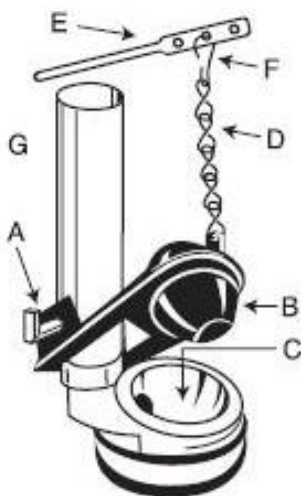

3" Universel Bouchon

3" Universal Tapón

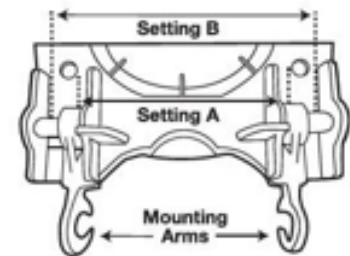

Installation / Installation / Instalación

1. Turn off water and flush toilet. Once flapper closes, mark the inside of tank where the water level is.
2. Remove the old flapper chain from the lever arm. Then remove the flapper from the flush valve by unhooking the ears from the mounting arms. Clean the seal rim of the flush valve.
3. If needed, adjust the flapper arm width and position the flapper so that the bulb is facing downwards. For wider flush valves push arms out to setting B on flapper. Rotate each ear downwards until they snap into place. Position the ears onto the mounting arms and snap into place.
4. Locate the name and model number of your toilet and match it up to the setting number on the Toilet Performance Chart. Use the small arrow on the green collar and rotate to the correct toilet setting number on the bulb lines up with the arrow. Notes: If you apply downward force on the bulb, it will not rotate.
5. Once the flapper is attached to the flush valve, the flapper should move freely when raised and lowered. Attach the chain to the lever arm using the clip. There should be minimal slack when the flapper is closed.
6. Turn on the water and flush the toilet. Make sure when the flapper closes, the water level is at the mark you made on step 1.
7. You can fine tune the amount of water that is released from the tank by rotating the flapper bulb one number at a time. The higher the number, the slower the flapper will close, allowing more water to flow from the tank.

A	Ears/Arms
B	Flapper/Bulb
C	Valve Outlet
D	Lift Chain
E	Lever Arm
F	Clip
G	Overflow Tube
