## STOP FLOOD DAMAGE BEFORE IT EVER STARTS<sup>TM</sup>

*Point-of-Use  
Leak Detection  
Devices*

**Mainline® FloodStop™** is a point-of-use leak detection device that automatically shuts off the water supply to the appliance the moment a leak is detected. Once water is detected, the motorized ball valves close and sound an alarm. **FloodStop™** devices limit potentially devastating flood damage, allowing the plumber, builder, and homeowner to have peace-of-mind knowing no flood caused by an appliance will go unnoticed. **STOP FLOOD DAMAGE BEFORE IT EVER STARTS™**

All **Mainline® FloodStop™** valves are lead-free, CNC-machined, motorized ball valves. Open valves auto-cycle closed every 30 days for regular self-maintenance.

FloodStop's Control Unit comes with an AC power adapter with optional battery backup. The "OPEN/CLOSE/MUTE" buttons on the front of the unit are clearly lit green to show status. All wired connections for easy installation. Sensor sensitivity can be adjusted at the control unit.

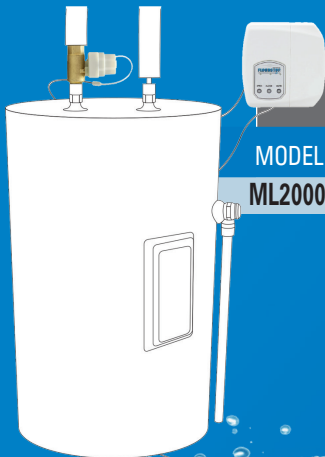

FloodStop's sensor is a simple circuit board that senses the smallest drops of water and alerts the valves to close. Sensitivity can be adjusted at the control unit.

**WASHING MACHINE KITS**

MODEL	DESCRIPTION	UNITS/CASE
ML20010	Washing Machine Kit 3/4" 90deg, Hot & Cold Valves	12

**WATER HEATER KITS**

MODEL	DESCRIPTION	UNITS/CASE
ML20001	Water Heater Kit 3/4" NPT MIP x FIP	12
